Micro-channel Condenser

The micro-pass flat pipe can achieve larger heat exchange area and higher heat exchange efficiency.The flat flow structure and the optimized flow channel distribution according to the changeof phase state ensure the flow rate and flow rateof pipeline liquid.**LLA9153 alloy** ensures no electrochemical corrosion of copper-aluminum inter-faces.The undulating fin has a **larger heat transferarea and flow disturbance** than the traditional condenser.The compact structure is lighter andsmaller than the traditional condenser withthe same heat exchange.

UC Series Evaporator/Air Cooler

UC L 2.0/10

Capacity/Area
Room Temperature, L:-5~5°C, D:-15~20°C, J:-25°C
Series Name

UC series is new design air cooler.

Adopting high efficiency aluminum fins and copper tube with diameter Ø9.52mm or Ø14mm.

Dividing into 3 series UCL, UCD and UCJ depend on the different finspace suit to different room temperature demand.

UCL for fresh storage with temperature at -5 to +5°C,

UCD for refrigerated storage with temperature at-15 to-20°C,

UCJ for freezer room with temperature at <-25°C.

1. Two sides end plate and water drain plate design into open type for maintenanceconveniences.

2. Front shell with inner concave design looks very nice, Overall shell with multi-foldeddedesign make high strength and less vibration.

3. Copper pipeline is optimized re-design for high heat exchange efficiency.

4. Assembling axial fan motor with high efficiency,low energy consumption suit tocomplex environments.

DH Series Dual Discharge evaporator/Air Cooler

It suits to temperature cooling device, widely used in processing room. Cool air discharge from both sides, much more soft. Dividing into 2 series DH-L and DH-D according to fin spacedifference, suit to different room temperature. DH-L series for room temperature -5 to +5°C, DH-D series for room temperature -20 to -15°C.

The scientific and reasonable bilateral outlet for cold air uniform distribution.	All the air coolers equipped new fan motor assemblies with high efficiency, low noise and internal thermal protection.	Shell metal made by high-quality steel sheet, high strength, excellent vibration resistance, and spray-treated to be more resistant to corrosion.	Inside of water drain plate is equipped with defroster for accelerated defrosting evenly.

Instructions for Manual Assembling of Capillary Hose ID 2mm

Working Temperature:-400°C +1300°C Working Pressure: 45 bar

Assemble one hose and check that the average diameter of the crimped sleeve is 7.1mm (just one of the four diameters can be maximum 7.3mm).

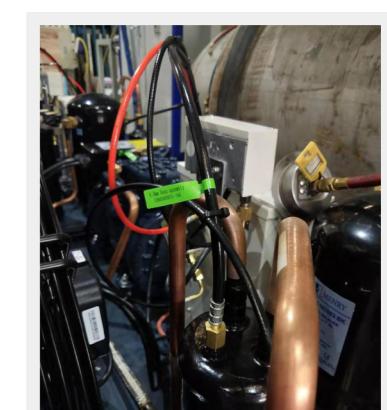

If not, regulate the cam till the obtained crimped sleeve is perfect on the basis of the above mentioned measures.

Advantages

High elasticity
No more brazing, flaring and bending of copper tubes.
Time saving for system installation and assembling.
Very low refrigerating gas permeation rate.

References for Application Scenario

Connection with pressure gauge, control units and oil return pipe.
